

Alvaro Carvalho

Senior Site Reliability Engineer

(22) 98146-9533 · alvarocarvalho_94@hotmail.com · Teresópolis, RJ — Brazil · [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Site Reliability Engineer with around 7 years across network engineering and SRE, focused on keeping multi-region platform infrastructure reliable at scale. My network engineering background gives me a systems-level view of infrastructure, paired with hands-on depth in Kubernetes/EKS, observability, and runtime performance tuning (JVM/Go). Incident management is central to how I work, from fast troubleshooting and mitigation under pressure to post-mortems and root-cause analysis. Advanced English with international experience in Ireland.

CORE SKILLS

AWS Cloud · Kubernetes (EKS) · Terraform · Prometheus Stack · New Relic · OpenSearch · Runtime / GC Tuning (JVM, Go, Node.js) · SLIs / SLOs & Error Budgets · Incident Management · Post-mortems / RCA · CI/CD · Go / Python / Bash · Networking (BGP, MPLS)

PROFESSIONAL EXPERIENCE

Trustly	<i>Remote</i>
Senior Site Reliability Engineer	<i>Apr 2026 – Present</i>
Site Reliability Engineer	<i>Aug 2023 – Apr 2026</i>
• Drive incident management end to end: fast troubleshooting and mitigation under pressure, followed by post-mortems, root-cause analysis, and runbooks distributed through alerts to strengthen on-call response. • Implemented and own two incident-management platforms (PagerDuty and Incident.io), covering base configuration, alert orchestration, and multi-team escalation flows. • Led a cross-team SLO initiative, defining SLIs/SLOs and error-budget monitoring and alerting adopted across multiple teams. • Tuned JVM (ZGC and G1GC) heap and GC policy for production services under memory pressure, substantially reducing heap footprint and eliminating recurring OOM restarts. • Redesigned Alertmanager grouping to consolidate similar alerts, sharply reducing alert noise and improving the on-call signal. • Built AI-assisted tooling and automation to accelerate troubleshooting and shorten incident recovery. • Diagnosed and resolved Prometheus cardinality growth that was silently inflating resource usage, restoring stable metric ingestion. • Operate observability and reliability for multi-region infrastructure on Kubernetes/EKS, with hands-on cluster management, partnering with DevOps on CI/CD and Infrastructure as Code (Terraform).	
Planet	<i>São Paulo, Brazil</i>
Integrated Operations Analyst	<i>Jan 2022 – Jul 2023</i>
• Delivered customer support and operational troubleshooting across production systems. • Managed change and incident processes following ITIL practices. • Performed monitoring and observability, and integrated internal tooling.	
Brasilnet	<i>Rio de Janeiro, Brazil</i>
Network Technical Analyst N2	<i>Feb 2018 – Dec 2021</i>
• Configured backbone and edge routers (VLAN, MPLS, BGP, static routing, PPPoE). • Supported and administered the FTTH access network. • Monitored infrastructure using PRTG and LibreNMS. • Configured transcoders and CDN servers for OTT and VOD applications.	

EDUCATION

INFNET	<i>2021 – 2022</i>
Postgraduate Specialization (Lato Sensu), Network Engineering	
Universidade Estácio de Sá	<i>2013 – 2017</i>
Bachelor's Degree, Mechanical Engineering	

CERTIFICATIONS

Cisco Certified Network Associate (CCNA)
ITIL — IT Service Management
